                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                                                                                                                                       The patent discloses antigenic peptides derived from MAGE-A12 protein and presented by human leukocyte antigens (HLAs). These antigenic peptides when presented by an antigen presenting cell having a HLA class I molecule, effectively induce the activation and proliferation of CD8+ cytocoxic I lymphocytes. MAGE-A12 is useful for treating a subject having a disorder characterised by expression of MAGE-A12. The protein microarray comprising MAGE-A12 is useful for diagnosing a disorder, especially cancer, by determining the binding of an antibody. I lymphocytes or a HLA molecule isolated from the subject suspected of having the disorder characterised by the expression of MAGE-A12. MAGE-A12 is useful for treating cancers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               including bladder carcinomas, melanomas, oceophageal, lung, head and neck, breast, colorectal carcinomas, myelomas, brain tumours, sarcomas, prostete and renal carcinomas and to produce antibodies. MAGE-Al2 antibodies are useful for diagnosing disorders characterised by expression of MAGE-Al2 immunogenic polypeptide. These MAGE-12 peptides are useful sequence is MAGE-Al2 immunogenic polypeptide. These MAGE-12 peptides are useful sequence is MAGE-Al2 immunogenic polypeptide. These MAGE-12 peptides are useful sequence is MAGE-Al2 immunogenic polypeptide. These MAGE-I2 peptides are useful sequence is MAGE-Al2 HLA class I-binding peptide. This antigenic peptide is presented by major histocompatibility complex (MHC) and is recognised by CTLS.

Immunogenic peptide having a human leukocyte antigen binding motif #1954.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This peptide is a tumour rejection antigen presented by a HLA-B44 molecule and derived from a MAGE-12 tumour rejection antigen precursor (TRAP). Claimed tumour rejection antigens (AAW23038-43) are able to bind to HLA-B44 positive cells, making them useful in identifying cells which present HLA-B44 molecules on their surfaces for use in the diagnosis and therapy of cellular abnormalities. The complex of the tumour rejection antigens and HLA can be used a sytolytic T cell response. The tumour rejection antigens and HLA-B44, can be used as vaccines to treat disorders characterised by expression of the TRAP molecule such as cancer, especially melanoma. Vaccines can also be prepared from cells which present the tumour rejection antigent/HLA complexes on their surface, such expenditive cancer cells and non-proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human leukocyte antigen; binding; immunogenic; glycoprotein; MHC; HLA; immune response; T cell activation; major histocompatibility complex; cytotoxic T lymphocyte; CTL; tumour rejection; viral infection; cancer; prostate cancer; hepatitis B; hepatitis C; AIDS; renal carcinoma;

The immunogenic peptides can bind to a specific HLA allele (i.e. HLA-A subtypes HLA-AZ.1, Al, A3.2 or A24.1 or HLA-B or C) and induce a cytotoxic T cell response against the antigen from which the peptide is derived.

Cytotoxic T lymphocytes (CTLS) which destroy antigen bearing cells are normally induced by an antigen from of a peptide fragment bound to maily induced by an antigen in the form of a peptide fragment bound to remaily induced by an antigen in the form of a peptide fragment bound to are particularly important in the motor celection and in fighting viral infections and cancers in mammals (especially humans) e.g. prostate cancer, hepatitis B and C, ALDS, and renal carcinoma. They can be administered as vaccines to elicit an immune response in cancer, or used to treat chronic or acute conditions. They are also useful diagnostically, and can be used to induce a cytotoxic T cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present invention describes MAGE2/3 epitopes (I). Also described are: (1) a clonal cytotoxic T lymphocyte (CTL) that is cultured in vivo and binds to a complex of (I); (2) a peptide (II) comprising (I) and a second epitope and has less than 50 contiguous amino acids; (3) a vaccine composition comprising (II), a unit dose of a peptide with at least 50 contiguous amino acids with 100% identify to the native peptide sequence of MAGE2/3, and a pharmaceutical excipient; (4) an isolated nucleic acid encoding (II); and (5) an isolated nucleic acid encoding (II). (I) has encoding (I); and (5) an isolated nucleic acid encoding (II). (I) has cytostatic activity, and can be used in vaccines and as an immunostimulant. A vaccine of (3) is useful for the treatment and prevention of cancer. (I) is useful for monitoring or evaluating an immune response by incubating a T-lymphocyte ample from a patient with compined and detecting the presence of the T-lymphocyte that binds to the patient and detecting the presence of the T-lymphocyte that binds to the peptide. The vaccine allows the opportunity to combine epitopes derived trom multiple tumour-associated molecules reducing the likelihood of tumour escape due to antigen loss. AAG84515 to AAG84909 and AAB99725 concept in month, and the present and the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                          An isolated prepared MAGE2/3 epitope (I) for use in pharmaceuticals for the treatment and prevention of cancer -

                                                                                                                                                                                                                                                                                                                                                                                      q
                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a composition (I) which comprises at least one human leukocyte antigen (HLA) binding peptide comprising an isolated, prepared epitope comprising one of 547 %-11 residue amino acid sequences (SI), given in AAB75803 to AAB76349. (I) has cytostatic, virucide, hepatotropic, antiinflammatory, anti-HIV (human immodeficiency virus) and protozoacide activities, which can be used in vaccine production and is an inducer of cytotoxic T-cell response. (I) is useful for inducing a cytotoxic T cell response against a present antigen in a patient expressing a specific major istocompatibility complex (MHC) class I allele, by contacting cytotoxic T cells (CTLS) from the patient with (I). (I) is useful as a vaccine to treat and/or prevent viral infection and cancer such as prostate cancer, bepatitis B, hepatitis C, human papilloma virus (HPV) infection, cytomegalovirus (CMV), acquired immunodeficiency syndrome (AIDS), renal carcinoma, carvical carcinoma, lymphoma, malaria, and condyloma
                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HLA molecule; cytotoxic T cell; immunogenic peptide; binding affinity;
                                                                                             Composition comprising human leukocyte antigen binding peptide which comprises isolated, prepared epitope useful for treating viral infections such as acquired immunodeficiency syndrome, and cancer -
                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MAGE-2 170 peptide with binding affinity for HLA-B7-like molecules.
                                                                                                                                                                                                                                                                                                                                                                                                 ;

This sequence represents an immunogenic peptide with binding affinity for HLA-B7-like molecules. A cytotoxic T cell (CTL) response against a partient by contacting a CTL with pertiate of 9-15 amino acids which binds to at least two an immunogenic peptide of 9-15 amino acids which binds to at least two conductors a cytotoxic T cell response. The immunogenic peptide has a sequence of 9 amino acids, comprising a binding motif, with from the N-to C-termini: primary anchor sites (PAR) at positions 2 (selected from Ala, Leu, Ile, Val, Met, Ser or Thr) and 9 (Arg or Lys) and at least one secondary anchor sites (SAR), i.e. Tyr, Phe or Trp at positions 3, 6 or 5, and/or pro at position 8. The immunogenic peptides are used in peptide based vaccines and therapeutic compositions, for treating viral, pared to fungal diseases or cancer, e.g. prostatic cancer, hepatidis or condyloma acuminatum. They can also be used to elicit a CTL response or vivial cancer return of the cells to the patient, e.g. where the patient does not respond to peptide vaccines or other therapies.

Check the patient does not respond to peptide vaccines or other therapies.

Selection of specific residues for PAR and SAR results in higher binding contactine acuminatum in the patient of pared immunogenicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Immunogenic peptide having a human leukocyte antigen binding motif #843.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human leukocyte antigen; binding; immunogenic; glycoprotein; MHC; HLA; immune response; T cell activation; major histocompatibility complex; cytotoxic T lymphocyte; CTL; tumour rejection; viral infection; cancer; prostate cancer; hepatitis B; hepatitis C; AIDS; renal carcinoma;
Inducing cytotoxic T cell response against specific antigen - using immunogenic peptide with binding affinity for HLA-A3-like molecules, to treat or prevent tumours and infections by virus, parasites etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
ŏ
                                                                                                                                                    AAY45390 to AAY48214 represent specifically claimed immunogenic peptides having a human major histocompatibility complex (MHC) Class I (also knowing a human leukocyte antigen (HLA) binding motif. The immunogenic peptides can bind to a specific HLA allele (i.e. HLAA subtypes HLAA21, Al, A3.2 or A24.1 or HLAAB or C) and induce a cytotoxic T cesponse against the antigen from which the peptide is derived.

The consideration of the consideration of a peptide fragment bound or mormally induced by an antigen in the form of a peptide fragment bound are particularly important in the form of a peptide fragment bound are particularly important in the mount rejection and in fighting viral infections and cancers in mammals (especially humans) or prevent viral infections and cancers in mammals (especially humans).

They can be administered as vaccines to elicit an immune response in individuals susceptible or otherwise at risk of viral infection or cancer, or used to treat chronic or acute conditions. They are also useful diagnostically, and can be used to induce a cytotoxic T cell response, by contacting a cytotoxic T cell with the peptide e.g. to produce CTLS ex vivo for infusion back into a patient. The polynucleotides encoding the immunogenic peptides are also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immunogenic peptide having a human leukocyte antigen binding motif #874
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human leukocyte antigen; binding; immunogenic; glycoprotein; MHC; HLA; immune response; T cell activation; major histocompatibility complex; cytotoxic T lymphocyte; CTL; tumour rejection; viral infection; cancer; prostate cancer; hepatitis B; hepatitis C; AIDS; renal carcinoma;

having a human major histocompatibility complex (WHC) Class I (also known as human leukocyte antigen (HLA) binding motif. The immunogenic peptides can bind to a specific HLA allele (i.e. HLA-A subtypes C peptides can bind to a specific HLA allele (i.e. HLA-A subtypes CHA-A2.1, A1, A3.2 or A2-L1 or HLA-B or C) and induce a cytotoxic T cell response against the antigen from which the peptide is derived.

Cytotoxic T lymphocytes (CTLS) which destroy antigen-bearing cells are normally induced by an antigen in the form of a peptide fragment bound to a HLA molecule, rather than the intact foreign antigen itself, and a perticularly induced by an antigen in the form of a peptide fragment bound to a HLA molecule, rather than the intact foreign antigen itself, and a perticularly induced by an entigen in mammals (especially humans) cor prevent viral infections and cancers in mammals (especially humans) e.g. prostate cancer, hepatitis B and C, AIDS, and rand mendication or individuals susceptible or otherwise at risk of viral infection or used to treat chronic or acute conditions. They are also useful diagnostically, and can be used to induce a cytotoxic T cell with the peptide e.g. to produce CTLs ex vivo for infusion back into a patient. The polynucleotides encoding the immunogenic peptides are also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
AAY45390 to AAY48214 represent specifically claimed immunogenic peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 5405940

GENERAL INFORMATION:
APPLICANT: Boon, Thierry; van der Bruggen, Pierre;
APPLICANT: Boon, Thierry; van der Bruggen, Pierre;
APPLICANT: De Plaen, Etienne; Lurquin Christophe; Traversari, Catia
TITLE OF INVENTION: ISOLATED NONAPEPTIDES DERIVED FROM
TITLE OF INVENTION: MAGE GENES AND USES THEREOF
NUMBER OF SEQUENCES: 22
CORRESSONDENCE ADDRESS:
ADDRESSEDE: Felfe & Lynch
STREET: 805 Third Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Title: Leucosulfakinin-II, a blocked sulfated insect neuropeptide with homology to chc A; Reference number: Az6335; MUID:87048769; PMID:3778455
A; Molecule type: protein
A; Residues: 1-10 < NAC;
C; Comment: This peptide was isolated from head extracts. It stimulates muscle contractic C; Superfamily: gastrin
C; Keywords: amidated carboxyl end; neuropeptide; pyroglutamic acid; sulfoprotein
F; 1/Modified site: pyrrolidone carboxyl end (Phe) #status experimental
F; 10/Modified site: sulfate (Tyr) (covalent) #status experimental
F; 10/Modified site: amidated carboxyl end (Phe) #status experimental
A;Experimental source: CBS 4095
C;Function:
A;Description: oxidoreductase; catalyzes the oxidation of D-amino acids to their corresp
A;Note: reoxidation of the enzyme by molecular oxygen is accompanied by the release of H
C;Keywords: FAD; oxidoreductase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rizu, H.; Adachi, O.; Yamada, M.

-!- FUNCTION: MUSCLE INHIBITING AGENT. INVOLVED IN THE NEURAL CONTROL OF THE VISCERAL MUSCLES OF THE HEART, ACCESSORY GLANDS AND OVIDUCT. MAY BE INVOLVED IN THE REGULATION OF SALIVA SECRETION.
-!- TISSUE SPECIFICITY: FOUND IN AXONS OF THE MALE ACCESSORY GLANDS, THE SALIVARY GLANDS, THE HEART, AND THE OVIDUCT.
-!- SIMILARITY: BELONGS TO THE FARP (FMRFAMIDE RELATED PEPTIDE)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bukaryota, Metazoa, Arthropoda, Mandibulata, Pancrustacea, Hexapoda,

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
